Benin	Mali
Burkina Faso	Nigeria
Cote d'Ivoire	Senegal
Ghana	Togo
Guinea-Bissau	

## International Epidemiology Databases to Evaluate AIDS (IeDEA) Consortium

IeDEA is an international research consortium established in 2005 by the National Institute of Allergy and Infectious Diseases (NIAID) to provide a rich resource for globally diverse HIV/AIDS data. IeDEA is a trans-NIH initiative that collaborates with the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), the National Cancer Institute (NCI), the National Institute of Mental Health (NIMH), and the National Institute on Drug Abuse (NIDA). Sites in various regions throughout the world collaborate to collect and define key variables, and implement methodology to effectively analyze data as a cost-effective means of generating large data sets to address the high priority HIV/AIDS research questions that are unanswerable by a single cohort. For more information, please contact [info@iedea.org](mailto:info@iedea.org).

GLOBAL COHORTS COMPOSED OF  
**>1,700,000**  
PERSONS LIVING WITH HIV/AIDS

# leDEA Regional Cohorts

Each region collaborates with clinical sites to identify and define key variables, harmonize and effectively analyze the data to generate large datasets. These data can be merged across regions to address research questions related to the impact of the global ART rollout on HIV-related clinical outcomes.

## WORKING GROUPS

observational cohorts enabling data-driven decision making

### Executive Committee

Composed of the Principal Investigators from the regions and NIH, this body coordinates multi-regional and cross-regional collaborations.

### Cancer

Assess the impact of HIV and antiretroviral therapy on the burden, spectrum and outcomes of cancer; disseminate findings across the network.

### Clinical Outcomes

Define demographic, clinical and other predictors of AIDS- and non-AIDS morbidity and mortality in persons living with HIV.

### Data Harmonization

Standardization of clinical definitions, identify critical measures and dissemination of quality assurance practices across the network.

### Pediatrics

Assess impact of HIV, comorbidities or coinfections, and therapy on survival, health and unique concerns of children and adolescents.

### Site Assessment

Periodically implement site surveys to systematically assess facility and program characteristics of HIV care and treatment programs.

### Strategic Data

Develop standards for data use and dissemination of research findings and manage collaborations and data requests from external organizations.

### Tuberculosis

Describe the epidemiology and treatment outcomes of TB/HIV+ patients; assess the prevention, diagnosis, and treatment of TB.
