International Epidemiology Databases to Evaluate AIDS (IeDEA) Consortium

IeDEA is an international research consortium established in 2005 by the National Institute of Allergy and Infectious Diseases (NIAID) to provide a rich resource for globally diverse HIV/AIDS data. IeDEA is a trans-NIH initiative that collaborates with the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), the National Cancer Institute (NCI), the National Institute of Mental Health (NIMH), and the National Institute on Drug Abuse (NIDA). Sites in various regions throughout the world collaborate to collect and define key variables, and implement methodology to effectively analyze data as a cost-effective means of generating large data sets to address the high priority HIV/AIDS research questions that are unanswerable by a single cohort. For more information, please contact info@iedea.org.

Each region collaborates with clinical sites to identify and define key variables, harmonize and effectively analyze the data to generate large datasets. These data can be merged across regions to address research questions related to the impact of the global ART rollout on HIV-related clinical outcomes.
